Ontario

F O R E W O R D

Export marketing research is a subject of considerable interest to our Department, to Ontario manufacturers and to businessmen who may be interested in exports. The Foreign Market Studies which are undertaken by our Section, are written for the use of our Trade and Industry Division, and specifically by our Marketing Branch and Trade Mission members. These studies depict the economic background of the countries that will be visited. For this reason our Foreign Market Studies are, in the first instance, working documents designed for the use of the Department and cannot be taken in their entirety as expressing the opinion or position of the Department of Trade and Development.

INTRODUCTION

The Australian economy is expanding at a rate higher than many western countries. The great minerals discoveries and the resulting acceleration in the economic activities are providing the key to rapid development.

With a GNP of \$32.6 billion and trade of \$4.71 billion exports and \$4.49 billion imports, Australia is a promising market for Ontario and Canada. As the standard of living continues to improve and the minerals explorations and processing accelerate, the markets for sophisticated consumer goods and capital equipment are expected to expand greatly. As the Australian authority is encouraging foreign investments, conditions for joint ventures and other capital undertakings are favorable. The most promising fields to find opportunities for exports and investments are mining, excavating, construction, food and mineral processing, as well as sophisticated consumer durables.

GENERAL INFORMATION

1. Geography and Climate

Located at the southern extremity of the Pacific Ocean, the Commonwealth of Australia is composed of the mainland of Australia and the island of Tasmania, totalling approximately 2.9 million square miles. In addition, it has under its administration the following territories: Papua, Norfolk Island, the trusteeship territories of New Guinea and Nauru, the territories of Ashmore and Cartier Islands, and the Australian Antarctic Territory.

The mainland of Australia is largely flat desert, whose monotony is only occasionally broken by eroded cliffs and rocks. The mountains are concentrated in the south-east part of the continent, close to the sea. Climate varies widely, from tropical to temperate, and the inland desert is one of the driest places in the world.

All big cities are on the coast, including all six state capitals and the capital of the Northern Territory. The only exception is the nation's capital, Canberra, a city of 110,000 people, created in North South Wales for political reasons. However, all this is changing drastically: since 1967, explorations and discoveries of mineral resources are transforming Australia from a land of sheep and kangaroos into one of greatest opportunity for investors in mining, refining and processing industries. The current boom is expected to continue, providing good opportunities for trade and investment.

2. Human Resources

Australia's 12 million population has been growing at an annual rate of 2.3% for the past 10 years. This still leaves the country one of the least populated in the world: about 4 people to each square mile, as compared to 60 in the U.S. and 6 in Canada (including Northwest Territories). Most of the population is concentrated along the coastlines, and over 60% of all Australians live in 7 major cities: Sydney (2.6 million), Melbourne (2.3 million), Brisbane (0.8 million), Adelaide (0.8 million), Perth (0.6 million), Newcastle (0.3 million) and Wollongong (0.2 million). The nation's capital is Canberra, where one-third of its 110,000 residents are civil servants. Canberra is a creation of a compromise in a dispute between Sydney and Melbourne as

to which of the two cities should be chosen as the nation's capital, and was designed and built in the 1920s by an American architect W.B. Griffin. The population is predominantly of European origin, and the official language is English. Immigration is a significant factor in the Australian population. In 1969-70, the net immigration was 113 thousand.

3. Constitution and Government

Australia is divided into five states, Tasmania, and two territories, as shown below:

<u>States and Territories</u>	<u>Area</u> (Sq.miles)	<u>Population</u> Thousands
New South Wales	309,433	4,567.0
Victoria	87,884	3,443.8
Queensland	660,000	1,799.2
South Australia	380,070	1,164.7
Western Australia	975,920	980.0
Tasmania	26,383	392.5
Northern Territory	520,280	71.4
Australian Capital Territory	939	133.1
Total	2,967,909	12,551.7

Source: Commonwealth Bureau of Census and Statistics

Legislative power in the Commonwealth is vested in a Federal Parliament, comprising the Queen, the Governor General, a Senate and a House of Representatives. Executive power is vested in the Governor General, presiding over an Executive Council, composed of Ministers of State. The actual executive power rests with the Prime Minister.

There are 4 political parties, and the parties in power are the Liberal Party and the Country Party, and the Ministers of State are as follows:

Prime Minister: Rt. Hon. W. McMahon
Deputy Prime Minister and Minister of Trade and Industry:
Hon. J.D. Anthony
Defense: Rt. Hon. J.G. Gorton
Primary Industry: Hon. I. Sinclair
National Development: Hon. R.W.C. Swartz
Treasurer: Hon. B.M. Snedden
Foreign Affairs: Hon. L.H.E. Bury
Labour and National Service: Hon. P.R. Lynch
Shipping and Transport: Hon. P.J. Nixon
Immigration: Hon. A.J. Forbes
Customs and Excise: Hon. D.L. Chipp
Housing: Hon. K.M. Cairns

The judicial power of the Commonwealth is vested in the High Court of Australia, Federal Courts created by the Parliament, and the State Courts. In addition, Industrial Tribunals deal with the interpretation of law, awards, imposition of penalties, and settlement of industrial disputes.

The major functions of the state governments include education, health and charities, law and public safety, certain business undertakings such as railways and tramways, and public utilities such as water supply and sewage.

STRUCTURE OF THE ECONOMY

1. General

The average rate of growth for the Australian economy had been 5.5% for the 1960s, a rate higher than that of many western countries, due to large discoveries in mineral and gas. In 1970-71, the annual growth had fallen to 4%, while unemployment increased from 53,000 in June 1970 to 71,000 in July 1971. It is predicted to reach 90,000 by June 1972. Average earnings rose by 10.5% while the retail price level rose by 4.8%.

The Australian economy has been based predominantly on agriculture and dairy products. Manufacturing has been expanding steadily, but mining was not significant. All this changed dramatically after a series of great mineral discoveries in the late 1960s. Nickel, aluminum, oil and gas were found in vast quantities, and as a result the economic foundation of Australia is now undergoing a fundamental transformation.

Although unemployment is increasing, Australia's unemployment rate is still under 2% of the work force. However, compared to the 0.8% unemployment in early 1970, this represents a large drop in employment, and is causing some concern. So far, productivity has been rising at the pace of 2.5-3% per year, and inflationary pressures have not been serious. However, rising income is expected to result in a significant expansion in consumer demand, and the Australian Treasury is warning against government overspending: net expenditures (after deducting revenues) increased by 14.5% in 1970-71.

The inflow of capital continues to increase, and contributes to the improvement in Australia's labor productivity. In the past decade, US\$7 billion of overseas capital was invested in Australia. The total private capital expenditures in 1969-70 was about \$2.4 billion (source: Monthly Review of Business Statistics). Foreign investment accounts for about 15% of total capital formation, and plays an important role in bearing the initial risks in mineral exploration and in introducing new production techniques.

Australia is rapidly expanding its service industries, and the proportion of the work force engaged in this sector is exceeded only in Canada and the U.S., according to OECD.

2. Agriculture

Australia has been a wheat, meat and wool exporting country for the past decades. In spite of steady growth in manufacturing and expansion in mining, agriculture continues to be an important foreign exchange earner. Agriculture accounted for about 7.7% of gross domestic product, or A\$2.1 million in 1969-70. Details of Australian agricultural production are shown below:

Source: Europa Yearbook

The largest item in agriculture is wool, followed by wheat, meat, sugar and syrup, hide and skins, and butter. Currently, the world market of wheat is uncertain, for in addition to the uncertain Chinese demand, large harvests in Canada and Argentina offer serious competition. The Australian fruit canning industry, faced with intense competition from South Africa and the U.S., and damaged by the U.K. devaluation, is faced with little possibilities of recovery in the level of price which was depressed. Since government assistance in the form of subsidies and tariff rebate for imported materials and machinery is of limited effect, the industry is increasingly active in trying to improve productivity, by introducing more capital-intensive technique. This will provide a market for machinery and equipment in fruit processing and canning.

3. Mining

Australia's mineral resources had not been significant. The most important mineral products being iron ore, copper, lead and coal. Recently, however, a series of large scale explorations and discoveries have been made. These discoveries are so significant as to change the entire economic foundation of Australia. As recently as 1960, the Australian Government prohibited the export of iron ore, as the reserve was estimated at 400 million tons, compared with the domestic consumption of 8 million tons per year. Now, the reserve is reckoned as between 20 to 100 billion tons, and the main producer, Hamersley Holdings, plans to export iron ore and steel all round the

world. Coal is the next most important foreign exchange earning mineral, chiefly sold to Japan (Australia's share in the Japanese market is nearly 40%). Lead, which was the top foreign exchange earner before the discoveries of iron ore and coal deposits, will be the fourth, after iron, coal and by 1974 aluminum. In the following, major mineral discoveries will be briefly enumerated:

- Bauxite was discovered in the Darling Ranges (Western Australia) in 1960, and on the Mitchell Plateau (Western Australia) in 1965, in addition to the deposits at Gove and Weipa, which were discovered in the 1950's. The government has awarded A\$35 million to build a new town at the site.
- Nickel was discovered at Kambalda (Western Australia) and Greenvale (Queensland) in 1966.
- Iron ore was found at Mt. Newman and Robe River (Western Australia) in 1961, and at Mt. Tom Price (Western Australia) and Savage River (Tasmania) in 1962. Following negotiations with a Japanese firm on a contract for 112 million tons of iron ore, the output of Mt. Tom Price (operated by Hamersley Holdings) would be increased by 5 million tons a year to an annual capacity of 22.5 million tons.
- A consortium of Japanese Malaysian firms is planning to develop two iron ore mines at Mt. Gibson and Mt. Northam in Western Australia amounting to \$1.2 billion in investment. The consortium is composed of Eastern Metal and Mining Co. of Malaysia (70% of control) and Koken Mining (15%) and Kakiuchi Trading Co. (15%).
- A manganese deposit was discovered at Groote Eylandt (Northern Territory) in 1960
- Pacific Asbestos Ltd., a Canadian firm, is to spend A\$17 million to develop asbestos deposits near Tamworth, about 280 miles north of Sydney.
- The great oil and gas deposits found at Bass Strait off the southeast coast, is now under price-negotiation. Estimated price of the contract is between \$14 and \$18 a ton, compared with the local price of \$30 a ton ex-refinery. In addition, the oil deposits found at Moonie (Queensland), in 1961, and Barrow Island (Western Australia) are already in production.

As a result of all this, minerals are expected to replace wool and wheat as Australia's chief exports. The gross value of mineral production has increased from \$400 million (ex-mine) in 1960 to \$1,000 million in 1970-71. At the present, the largest mineral export is iron ore, followed by coal. By

1974, aluminum is expected to be in the third place, and by 1980, Australia is expected to become the largest producer of nickel in the world. As exploration is still being carried out at an extremely vigorous pace, a great need for equipment for that purpose exists. Also, the demand for mineral handling and processing machines is increasing rapidly. The main mineral sites are Weipa, Queensland (bauxite), central Queensland (coal), Kambalda, Western Australia (nickel), and Bass Strait, southeast Australia (oil and gas). Australia is also the world's largest producer of rare minerals such as rutile, zircon and ilmenite. The largest purchaser of Australia's mineral resources is Japan, which purchases 85% of Australia's exports of iron ore, 98% of coal, and 60% of all minerals. The latest statistics on Australia's minerals are shown below:

	UNIT	1966	1967	1968	1969*
Coal (Black)	million tons	33.3	34.7	40.3	45.4
Coal (Brown)	" "	21.8	23.4	23.0	22.9

4. Industry

Australia's manufacturing sector accounted for 26% of its total civilian employment, and the sale of manufactured goods accounted for 65.6% of its retail sales (1970). Industrial development has been very rapid in recent years, especially since the large mineral discoveries. Two decades ago, manufacturing accounted for only 5% of Australia's exports, compared to the 17% share at present. The major industrial products and their outputs are shown below:

Selected Industrial Products of Australia, 1968-69 and 1969-70

<u>Items</u>	<u>1968-69</u>	<u>1969-70</u>
Electricity (million kwh)	48,792	53,832
Gas (million therms)	331.2	505.2

Source: Commonwealth Bureau of Census and Statistics, Apr.1971

The most important items in the industrial sector are iron and steel, motor vehicles and parts, petroleum and natural gas, and light and intermediate machineries. Expansions have also been evident in pulp and paper, plastics, electric transmitters, electronic equipment, consumer durables, and such heavy industrial products as railway rolling-stock and shipyard equipment. In 1969-70, the overall growth rate of industrial production was 9.5% over the previous period.

Agricultural Products

Despite rapid expansion in secondary manufacturing, the industries based on agricultural and dairy products continue to be important. The wool industry, traditionally an important foreign-exchange earner, is being adversely affected by the increased use of synthetics, a fall in international wool prices (34% in two seasons, 1967-1969), and in the last instance by coarser wool quality. There are half a million wool growers, and a decline in the wool industry results in serious socio-economic problems. Special aid of \$30 million was set aside for wool growers, and a Wool Commission was established to operate a reserve price system for wool sold at auctions.

Motor Vehicles

Motor vehicle production is growing, as the demand for automobiles is steadily rising. In 1969-70, Australians spent A\$842 million (C\$1,012 million) for new cars and A\$747 million (C\$898 million) for repairs and maintenance. 405,700 new vehicles were bought in 1969-70, compared to 375,000 in the previous year. Future demand is projected at around 750,000 to 800,000 per year by the end of the 1970s. From large motor manufacturing firms - GM- Holden, Ford, Chrysler, and British Leyland - now have capital investments of at least A\$745 million (C\$895 million). The Australian market is dominated by the "light six" cars, large in size but with only six cylinders, and account for over 50% of all cars sold in Australia. In the medium or compact car range, the Japanese have recently expanded their share considerably, at the expense of British Leyland products and Volkswagen. Now Japanese cars account for 15% of this market.

The Volkswagen beetle virtually became extinct in the Australian market as a result of Japanese invasion, dropping from a share of 7.5% to 2.9% in a year. The import duty on cars declines progressively as the percentage of locally manufactured content increases.

Chemicals

Australia's chemical industries expanded rapidly, in terms of investments, because of the availability, for the first time in Australia's history, of great natural resource supplies. The most impressive growth was registered in plastics: polyester production nearly doubled between 1966-67 and 1968-69, from 630 thousand cwt to about 1,113 thousand cwt. It is estimated that the Australian demand for plastics will grow at 15% per year, or doubling every 6 years. This justifies setting up plants with a capacity larger than present market demand. Chemicals and explosives used in minerals exploration and

excavation also showed remarkable expansion: their sales amounted to A\$13 million (C\$15.6 million), excluding caustic soda used in the alumina industry. In this field, the growth rate of demand is about 11% (Australian Chemical Industry Council). At Altona, Union Carbide is building a new low density polyethylene plant, and Hoechst Australian is expanding its high-density polyethylene capacity to 42,000 tons. Bayer is building a A\$50 million (C\$60.1 million) isocyanates plant at Newcastle, and BSAF of Germany is establishing a pigment plant. Dow Chemical's new styrene butadiene latex plant and associated epoxy resin plant at Altona have begun production. Altona is a big petrochemical centre, based on ethane feedstock and the Bass Strait natural gas fields.

Fertilizers

The fertilizer industry however, is one branch of the chemical industry that is adversely affected by the drought which is the most serious in recent decades. After two large nitrogerous plants were erected in 1969, one at Newcastle (New South Wales) and the other at Kwinana (Western Australia), total sales remained unchanged from the previous year. Sales of phosphatic fertilizer actually declined in 1970. In addition, the wall of protective tariffs, of which the chemical industry and particularly the fertilizer industry have been the chief beneficiaries, is coming under attack. First, there is a general trend toward more rigorous definition of economic protection, and secondly, there is growing protest from rural industries which claim that they are the victims of higher costs resulting from protection. Then there is the world-wide protest against pollution, which is directed not only toward the fertilizer industry but toward the chemical industry in general. Nevertheless, when put in proper perspective, the future of the chemical industry seems to be very bright.

Iron and Steel

The steel industry is at present monopolized by the Broken Hill Property Co. Ltd., and further development of new steel firms, despite Australia's eagerness to have another steelmaker and the willingness of many steel-makers to exploit the Australian iron ore deposits, is very slow. A large combine, including Armco (U.S.), Kaiser Steel, Hamersley and Conzinc Reotinto (Australia), and August Thyssen-Hutte (West Germany) and involving a capital of \$700 million, is under negotiation. The new concern visualizes steelwork on both coasts with 2 million ton initial annual production each, back-loading coal to the west coast after taking iron ore eastwards. The ultimate production target is 10 million tons. However, steel is a highly emotional issue. The new development is handicapped by interstate rivalries and political manoeuvring of companies and politicians.

Electronics

Foreign ownership and control is significant in the field of electronics, although not as predominant as in the auto industry. Foreign firms account for about 37% of annual value of production, and about 35% of manufacturing employment in this industry. In 1970, the annual retail sales of electrical products amounted to about \$1.3 billion. About 97% of Australian households possess a refrigerator, 99% an electric cooking range, 83% a washing machine, and 88% a television.

Textiles

Textiles have been traditionally important, having the supply of wool as its base. The recent popular use of synthetics is not likely to affect the Australian textiles industry too seriously, as Australia is now endowed with a great supply of petroleum, which is the main source of synthetic materials.

5. Public Utilities

a. Energy

Australia produced an estimated 56 billion kwh of electricity in 1969, and the value of energy used for heat, light and power amounted to over A\$400 million. Electricity consumption is growing at the rate of about 10.5% a year, with the increase in installed capacity growing at 9.3% and electricity production expanding at about 8.7%.

b. Transportation

Australia has about 571,000 miles of roads, of which about 87,000 is sealed, 142,000 is macadam or similar composition, and 342,000 is natural surface. There are 4.6 million motor vehicles. Railways are of various gauge, totalling 25 thousand miles. Civil flying is subject to legislative control by the Commonwealth Government. There were (in 1966) 385 licenced land aerodromes, 110 government land aerodromes, and 13 water aerodromes in Australia. The Australian merchant marine includes all vessels over 200 gross tons. In 1966, there were 129 coastal vessels and 16 overseas vessels. Most shipping is done by the U.K., the U.S., Panama, and Japan. Major ports are Sydney, Melbourne, Perth, Brisbane and Adelaide.

c. Communications

The Overseas Telecommunications Commission is responsible for overseas services by cable, radio, telephone, including radio telephone services. In 1969, there were 3.6 million telephones. A total of A\$400 million was spent on postal and telecommunications.

There are 34 national television stations, 39 commercial stations, and 2.7 million broadcasting licences and 2.8 million television licences in 1970.

6. Tourism

In Australia, tourism is regarded as a \$1.3 billion a year industry. In 1968, the tourist revenue was as follows: Holiday motoring, 38%; accommodation, meals and sightseeing, 39%; domestic airline passenger services, 10%; expenditure by overseas tourists, 8%; trains, 4% and road coach 1%. Detailed statistics of tourism in Australia are shown below:

In 1969, the total number of tourists was 361 thousand, a 20% increase over 1968.

Australia's share of international tourist business is still only 0.78%, but Australia is attempting to expand the tourist facilities needed to accommodate the expected doubling of business in 5 years. There is no reliable statistics on the annual increase in the number of rooms, but the \$60 million annual construction seems to be lagging behind the pace of expanding tourism. Australia is emphasizing the attraction to North American tourists. In 1963 only 16% of foreign visitors were North American, but the number is increasing. In 1969, 19% came from the U.S., 29% from South Pacific, 11% from the U.K., 5% from Europe, 35% from Asia (including American servicemen in Viet Nam, and 1% from Africa). There is a good market opportunity for hotel and restaurant equipment.

7. Finance

Until February 1966, Australian currency was the Australian pound, equal to US\$2.244. A new monetary unit the Australian dollar, equal to one half the Australian pound, was introduced on February 14, 1966. The new currency adopts the decimal system, and currently exchanged for \$1.1066 in Canadian dollar (Oct. 5, 1971).

The central bank is the Reserve Bank of Australia, which in addition to being a central bank and conducting ordinary banking business, provides special financing facilities through its rural credit department for processing, manufacturing and marketing primary products. There are 15 trading banks, 13 saving banks, and 43 companies registered under the Life Insurance Act.

In February 1970, the Australian Government announced that it intends to set up an Industrial Development Corporation, which will not have the status of a bank but that will provide loans with the purpose of ensuring a greater proportion of Australian development remains in Australian hands.

Australia's high rate of economic growth is largely attributable to the high rate of capital formation. Total capital expenditure in 1970 was over \$7 billion, or 32% of gross national expenditure. Direct and portfolio investment from overseas has been very important. Net capital inflow in 1968-69 accounted for about 15% of total capital expenditure, amounting to \$1.2 billion. Foreign capital has been prominent in risk-taking initial investment in many fields, not the least of which is exploration for mineral resources. The breakdown of sources of capital is shown below:

<u>Countries of Origin</u>	<u>A\$ million (1968-69)</u>
U.K.	433
U.S. and Canada	359
Other	354
Total	1,112

FOREIGN TRADE

1. Structure of Foreign Trade

During the period between 1960 and 1970, the total value of Australia's trade increased from A\$4,104 million to A\$8,004 million, or 95%. Of these, exports rose more rapidly than imports: during the same period, imports increased 78%, or from A\$2,172 million to A\$3,876 million, compared with exports, which increased 114%, or from A\$1,932 million to A\$4,128 million.

In 1970, Australia's imports accounted for 17% of gross national products, and exports accounted for 18%. Australia's five largest trade partners are the U.S., U.K., Japan, West Germany, and Canada; their 1969-1970 market share is shown below.

	<u>Australian</u> <u>Imports 1969-70</u>		<u>Australian</u> <u>Exports 1969-70</u>	
	A\$mil.	%	A\$mil.	%
U.S.	965	24.8	556	13.5
U.K.	845	21.8	489	11.8
Japan	481	12.4	1,021	24.7
West Germany	258	6.6	116	2.8
Canada	151	3.9	113	2.7
New Zealand	86	2.2	199	4.8

Source: Europa Yearbook

In addition to the above list, the People's Republic of China imported A\$126 million, mainly wheat, from Australia. The pattern of trade, which showed predominance by a few North American and European countries (plus Japan) as both the suppliers of Australia's imports and buyers of Australia's resource exports, is likely to continue. The rise of the U.S. as the largest trade partner, replacing the U.K., is likely to continue, in view of the large scale mineral discoveries.

2. Analysis of Australia's Imports

In 1969-70, 17% of gross national product was accounted for by imports. Since the end of the Second World War, the U.S. has replaced the U.K. as the largest supplier of Australia's imports. The most important general item is producers' materials, followed by capital equipment. The trade pattern is strongly affected by political development. One of the outstanding features of recent Australian trade is the increasing importance of the U.S. as a supplier.

As the U.S. comes closer to taking over from Britain as Australia's military and diplomatic partner, Australia's trade pattern has been undergoing significant change. Now,

even its military arms requirements are supplied by U.S. manufacturers. The second feature is the importance of Japan as a supplier of Australian imports. As yet, Japan accounts for only 12.4% of Australia's import market, and its commodity range is limited to a few items, with textiles and motor vehicles as the most important. It is expected that the Japanese government will use its considerable trade deficit with Australia as evidence to urge the Australian government to liberalize its restrictions on imports from Japan. The breakdown of Australian imports is as follows:

Chief Australian Imports
A\$ '000

IMPORTS	1967-68	1968-69	1969-70*
Producers' Materials for use in:			
Building and Construction . . .	99,887	131,369	132,651

3. Analysis of Australia's exports

What is said about Australia's imports, applies equally to Australia's exports: the increasing importance of the U.S. as its military and political partner has led to the rise of the U.S. as both Australia's customer and supplier. In the 16 years between 1954 and 1970, Australian exports to the U.S. have more than trebled, and now 14% of all Australian exports go to the U.S. The chief commodities have been wool, meat, and sugar, but minerals will be the largest items in the 1970s. The rise of Japan as a customer of Australia's exports is even more spectacular. Accounting for only 7% of Australia's exports 15 years ago, Japan is now the largest market for

Australia's exports, accounting for 24.7% of total Australian overseas sales, resulting from the tremendous expansion in Japan's textile and heavy industries, which led to the increased imports in wool and minerals.

Australia's exports are still mainly agricultural; wool and wheat still accounting for nearly 30% of exports. This is expected to change drastically in the 1970s, with aluminum, iron ore, nickel and crude oil reaching the top of the list.

In the following, Australia's main exports by commodities are shown: (A\$'000)

EXPORTS	1967-68	1968-69	1969-70*
Food and Live Animals	1,058,988	1,000,253	1,234,915

Source: Europa Yearbook

The picture presented above shows a shift in relative importance from food and live animals to crude materials. But the traditional export items such as wool and wheat are expected to continue being important.

Exports to the People's Republic of China increased dramatically: between 1968-69 and 1969-70, it increased from A\$67 million to A\$126 million with the largest increase accounted

for by wheat. Also, Japanese supermarket and restaurant interests are planning to buy about \$250 million worth of goods including shell fish, frozen and canned food, clothing, etc. from Australia. However, it is minerals that will be the real glamour in the growing Australian exports. According to the Australian Minister of National Development, Mr. R.W.C. Swartz, the gross value of Australia's mineral and metal exports in the financial year 1976-1977 would be almost A\$2 billion per year. This figure has been estimated on the basis of existing contracts, and does not include projected new developments and projects that are still under feasibility studies.

Australia has been exporting the bulk of its goods - wool and wheat to England. Although the U.S. is rapidly increasing in importance to Australia, and Japan has actually surpassed the U.K. to become Australia's largest market, the position of the U.K. is still very important. The 5 largest customers of Australia's exports are as follows (1969-70):

	<u>A\$million</u>
Japan	1,021
U.S.	556
U.K.	489
New Zealand	199
China (People's Republic)	126

Source: Europa Yearbook

The U.K. had been the most important trading partner of Australia up to the Second World War, accounting for as much as 40% of Australian exports. Since 1945, the U.K. has declined in her importance to Australia: in 1969-70, Australian exports to the U.K. were A\$489 million, or 11.8% of total Australian exports. The prospective entry of the U.K. into the E.E.C., therefore, will have much less impact, though it will affect the bulk of Australian exports to that country - dairy products (especially meat, butter etc), manufactured goods, and cereals. It is expected that the effect of reduction in exports to the U.K. will be minor, and can be adjusted to without serious difficulty in employment and production.

CANADIAN TRADE WITH AUSTRALIA

In 1970, Canada imported \$96.3 million from Australia. This represents a 27% increase over 1969. Canadian exports to Australia were far higher in value: in 1970, it amounted to \$197.7 million, representing again a 21% increase over 1969. As a result, Canada is in an overall balance trade surplus position vis-a-vis Australia. Among the main Canadian imports are meat, raisins, raw sugar, alumina and nickel ore. These items make up about 60% of all Canadian imports from Australia. On the other hand, the major exports from Canada are asbestos fibre, sulphur, lumber, newsprint, power boilers and parts, aircraft and parts and motor vehicles and accessories, together accounting for 56% of all Canadian exports to Australia.

Canadian goods imported by Australia enjoy Commonwealth Preference treatment.

Market Potential for Canadian and Ontario Products

In the 1970s, the Australian economy is expected to undergo significant expansion in several sectors.

The most promising sector is the mining and minerals processing industry, where the demand for excavating, processing and handling equipment is expected to treble. Investigation has proved that Australia has sufficient deposits of most essential minerals to face future needs with confidence. Especially, in iron ore, deposits are sufficient to supply the world's needs for several centuries. Together with the expansion of the mining industry, its offsprings - new towns, housing projects, ports, roads, railways, and airports - are also expanding. For example, a housing project involving 13,698 new houses and flats valued at \$127.9 million was approved for 1970. Also, the New South Wales government recently approved an expansion project for the State's railway system, involving \$90 million.

Australia's tourist business is expected to double in five years, and although hotels and other tourist facilities are expanding rapidly, the \$60 million annual bill in hotel and motel construction is not keeping pace with the need, and a step-up is planned. This will give rise to a market for hotels and restaurants, construction materials and equipment.

In electronics, the traditional pattern has been to import the larger voltage transformers, motors and switchgear, and to manufacturing smaller capacity units at home. This pattern is set on the assumption that the Australian domestic market is not large enough to accommodate a manufacturing firm of sufficient economical scale. The import market for electronic equipment amounted to \$20.8 million in 1968, of which 67% was communication and telecommunication equipment and parts.

The long-run prospect for the market of consumers' goods is favorable, as Australia develops its secondary manufacturing industries and continues to benefit from increased natural resource deposits.

Ontario exports to Australia were \$92.7 million in 1970, a 31% increase over 1969. The largest items were nickel ore (\$2.5 million), plastics (\$2.6 million), nickel alloys (\$4.5 million), autos and trucks and parts (\$34.2 million), aircraft (\$3.7 million). A detailed table of Ontario exports is provided in the appendix.

Canadian and Ontario Trade with Australia, 1968-1971

INSTITUTIONAL FRAMEWORK

Essentially, the Australian government takes the free enterprise approach.

Current concern is to encourage the development of secondary manufacturing industries in Australia. To this end, the Government of Australia has inaugurated several programmes, including the Plan SV (for Small Volume), which is designed to increase Australian content in manufactured goods, specifically motor vehicles; and the Industrial Development Corporation, which is designed to "ensure that a greater proportion of Australian development remains in Australian hands".

1. Investment

Foreign firms need no special authorization to set up business. They are free to enter most activities in the private sector and to take 100% ownership, though the government prefers to see participation by Australian capital. Restrictions: foreign interests may not enter the banking business, they may not own over 15% of commercial radio and television companies, and they may not own more than 20.9% per firm or 40% in toto of life insurance companies.

As for take-over, the government announced in September 1969, amendments to the Uniform Companies Act, designed to make foreign acquisition more difficult.

In the automobile industry, there is a local content requirement: duty concessions will be granted to manufacturers of light motor vehicles (under 25,000 units of sales per year) who have reached a level of 85% local content.

2. Licensing

In general, the Australian laws on patents and trademarks follow the British pattern. The strength of an Australian patent is likely to vary from case to case. Royalties tend to range from 2.5% to 4% of factory cost.

3. Remittability of Funds

Under Commonwealth Law, all foreign exchange transactions are controlled by the Reserve Bank, but the trading banks act as the Reserve Bank's agents. Payments of profits are subject to exchange control approval, but the remittance of profit is usually approved except for exchange crises. No case of refusal to permit the repatriation of capital is known.

4. Incentives

There is no federal tax or capital incentive as such, but there are important export incentives, incentive for research, and a special capital incentive granted to investors in the Northern Territory.

5. Trade Policies

Australia grants Commonwealth Preference treatment to member countries, and Canada is enjoying such treatment. Tariffs range from high (over 50%), medium (25-50%) to low (under 25%), and the Tariff Board systematically reviews the protection of major existing industries. In addition to tariffs, the government has dumping duties, a 10% tax rebate as an export incentive, and the EPIC (the Export Payments Insurance Corp.) to cover any political and commercial risks facing the exporters.

6. Tariff System

Australia's tariff classification follows that of the Brussels Tariff Nomenclature (BTN), adopted in July 1965.

It is a two-column system, with one set of duties under general tariff schedule and the other under preferential schedule. Canadian goods enjoy preferential treatment.

Most duties are ad valorem, but some are specific, generally based on the actual weight of imported merchandise.

An important provision is made in the tariff legislation to permit duty-free import of goods for certain purposes, including (1) development of Australian industry and natural resources, (2) repair or manufacture of goods in Australia, (3) public hospital or education, (4) use by territories, (5) exclusive use for the practice of religion and (6) other essential purposes.

Though some imports are subject to an import surcharge called the primage duties, raw materials and other goods of essential character are exempt. Where applicable, the rates are generally 10% general and 5% preferential or 5% general and free preferential.

Penalties are imposed for violations of customs regulations, including illegal handling, evasion of duties, etc.
